The smart glass for bathrooms

RAUVISIO CRYSTAL

The smart glass for bathrooms

The standards of quality and design in bathrooms have reached a completely new level in recent years. The innovative surface material RAUVISIO crystal fully lives up to this trend and offers maximum design flexibility for bathrooms that make people feel good. RAUVISIO crystal is a polymer glass that boasts a high-quality, glassy finish while completely eliminating the disadvantages of real glass.

The smart glass stands out with its intelligent benefits for the end customer:

High-quality finish

Thanks to their **brilliant depth effect**, RAUVISIO crystal fronts become the highlight of any bathroom. The **white effect** means green hazes are a thing of the past, leaving the fronts free to radiate their flawless colors. RAUVISIO crystal can be mounted directly on the wall and therefore allows you to realize **large-format designs**. All of the surfaces then look **as if they were made in a single piece**.

A cozy surface that is **not cold to the touch** and **tends to mist up less** than real glass.

Note for the retailer: A slight green tint can always be seen in real glass fronts when the light is refracted in a certain way.

Hygienic cleanliness

The joint areas of traditional real glass fronts can collect bacteria and germs that are virtually impossible to remove. Unlike real glass fronts, RAUVISIO crystal fronts are **completely jointless** and therefore fully satisfy the high standards of hygiene expected for bathroom use. Even when used as a wall panel, RAUVISIO crystal slim is extremely hygienic, **as only a small number of barely perceptible joints are formed in the paneling**.

Easy to clean

The surface is lacquered and therefore extremely resistant to dirt. **Dirt can be cleaned off easily using water and a microfiber cloth**.

Scratch-resistant

The product has **excellent scratch-resistance in day-to-day use**, meaning the surface remains beautiful after many years, just as it was on day one.

Note for the retailer: The scratch-resistance is similar to that of real glass.

Can be written on

High-gloss RAUVISIO crystal fronts can be **written on using standard whiteboard markers**. This allows you to leave short messages for your loved ones in your everyday life. You can also request fronts or wall panels with a magnetic function.

Extremely resistant to deformation

Even after many years of use, RAUVISIO crystal fronts ensure **lasting stability and warping resistance thanks to their symmetrical construction**.

Note for the retailer: Real glass fronts are not guaranteed to resist warping. RAUVISIO crystal fronts, on the other hand, are TÜV-certified (for water, temperature and heat resistance) and therefore warp-free.
