

## TRES|PA® TOPLAB® BASE

For a UK biobanking and bioprocessing hub, Trespa® TopLab® is the top choice.

**With over 50 years' experience, Roylance Pharma are recognised as leading UK based specialists in biobanking and stability storage of pharmaceutical and biological samples.**

In 2021, Infinity BiologiX, a global leader in biobanking, bioprocessing and analytics acquired Roylance Pharma rebranding as Sampled SMART Labs, with the mission to be the lab behind every transformative health innovation.

As part of their growth to service more clients in the UK and Europe, Sampled SMART Labs expanded their state-of-the-art research and analysis lab based in North Lanarkshire, Scotland to 3000sqft.

Our long-standing customer **Mark Finn Laboratory Furniture Ltd**, who has over 35 years' experience in the design, manufacture, and installation of high quality laboratory furniture for projects within healthcare, medical and pharmaceutical industries, was responsible for the manufacturing of new work surfaces to house additional equipment and co-working spaces through their operating business **Lab Tables**.

### Trespa® TopLab® BASE Solution

Having worked on over 10,200 projects within healthcare, medical and pharmaceutical industries, it comes as no surprise that the Trespa® TopLab® range for scientific surface solutions is Lab Tables' material of choice.

#### Highlights:

- 1 A durable scientific surface solution that meets the needs of a highly used co-working space.
- 2 A supportive partnership between an OEM and recognised Trespa® TopLab® UK Distribution Partner.
- 3 Trespa® TopLab®, a recognised and trusted scientific surface solution.

For this project our customer understood that the new work surfaces being produced as part of the expansion needed to be durable and functional to suit the demands of a highly used space in a shared working area.

Trespa® TopLab® BASE delivers excellent resistance to wear and tear. It is ideal where severe use and frequent cleaning is anticipated, as the surface is not adversely affected by moisture.

To complement the clean and contemporary aesthetic of the lab's expansion the decor selected for the work surfaces was Trespa® TopLab® BASE in White (EO-00).

## Results

Recognised as the UK Premium Partner of Trespa® TopLab® materials, Performance Panels Ltd were on hand to support our valued customer Lab Tables with this project. From supplying samples and technical datasheets for the client to review, to meeting the delivery and manufacturing timescales for the new benching.

During an important time of growth for the client, Trespa® TopLab® BASE proved to be the material of choice to achieve highly durable work surfaces in an expanded co-working space suitable for a functional and scientific environment.

With the client, already familiar with the Trespa® TopLab® range as it has been used throughout their North Lanarkshire facility, the use of Trespa® TopLab® BASE can only reinforce their confidence in knowing that they can trust in Trespa® TopLab®, scientific surface solutions shaping the scientific world.

**“Performance Panels always provide a great and responsive customer service, supporting us to fulfil our specified Trespa® TopLab® laboratory furniture.”**

**Martin Finn, Director, Mark Finn Laboratory Furniture Ltd**
